

INVESTOR DECK · 2026 · KAZAKHSTAN → THE WORLD

SEJIRE

**Free first.
Forever later.**

Shezhire for the whole family.

Arweave when you need it — not because you must.

00 · THE BET

A stranger's company should not own your ancestors.

Ancestry and MyHeritage keep family history on their servers — for as long as you pay. SEJIRE gives memory back to the family: 12 words, encryption on the device, Arweave for centuries.

The lineage is scattered across chats, Excel, and other people's clouds

01 Hard to start

Genealogy is overloaded. People need to begin with themselves — not a dissertation.

02 Nothing to share

A PDF for the wall, a letter to relatives, a print for a toi — without a subscription.

03 The data is not yours

The history lives only as long as the company and your plan do.

04 Forever is locked

Permaweb can keep records for centuries. An ordinary family does not buy tokens.

Zheti ata — a ready wedge into the market.

In Kazakhstan, knowing seven generations is the norm, not a “why would I?” pitch. One PDF in the family chat brings the next people in. A cultural product beats a generic family tree.

SEJIRE — shezhire for the whole family

01

Start with yourself

Mother, father, children — “+” cards. The draft lives in the browser on its own.

02

Download a PDF

A tree or an ornamental shezhire — mail, print, toi.

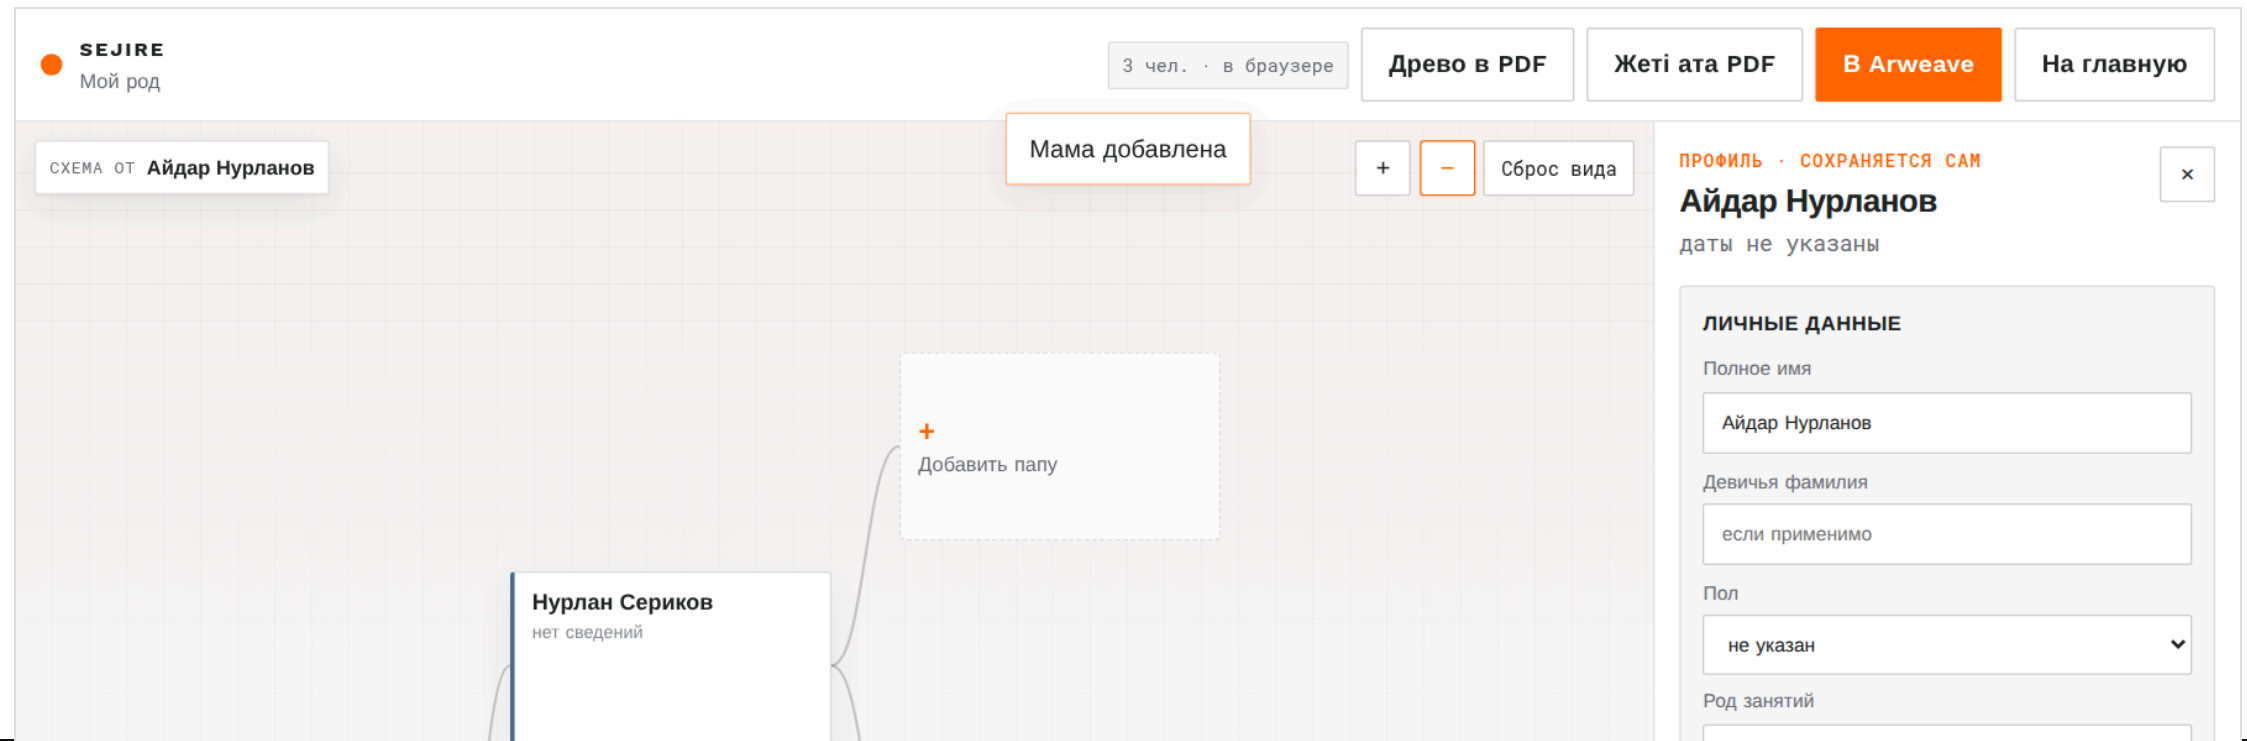

03

Forever, if you want

12 words + about \$3. No crypto to buy. Ciphertext → Arweave.

This is what family memory looks like

Quiet, Apple-like UX. Cultural fields are optional. The brand leads the features.

You do not pay to use it

Card and crypto only if you want an eternal copy. Everyday family use stays free in this layer, for good.

Create

Open the site — build the tree.

Save

Draft in the browser. No account.

PDF

Tree and zheti ata / shezhire.

Share

Mail, file, print for the wall.

Lock the lineage for 200+ years

KEY

12 words

BIP-39. The seed never hits a server. Only the family can open the vault.

PAYMENT

~\$3 in fiat

Kaspi / card. The user does not buy AR. The SEJIRE treasury pays the network.

STORAGE

Arweave

AES-GCM ciphertext. Endowment model. An immutable snapshot of the family.

Required? **No.** · Crypto for the user? **Zero.** · SEJIRE account? **Not needed.**

Not Ancestry. Not DeepFamily. SEJIRE.

Ancestry

- Subscription lock-in
- Data sits with the company
- No forever
- West + DNA

DeepFamily

- Needs an EVM wallet
- Not permaweb
- Crypto-native UX
- Not shezhire

SEJIRE

Free to start

Kazakhstan is not a pivot. It is a weapon.

The culture is already bought

Zheti ata is the norm. No need to sell “why know your ancestors.”

Kinship virality

One PDF in the family chat = organic growth without a CAC lecture.

Web3 without the pain

The free layer removes fear. Forever is a quiet upsell.

The name is already ours

[sejire](#) on ArNS. Canon: [sejire.ar.io](#).

KZ → the belt → the world

I **Kazakhstan**

Zheti ata, PDF for a toi, Kazakh/Russian, lineage communities, Kaspi.

II **CIS / Turkic belt**

The same seven-generation tradition — Kyrgyzstan, Uzbekistan, and neighbours.

III **The world**

An eternal family vault for diasporas and anyone tired of subscriptions.

The MVP is already live. Not a slide — a product.

Live

Tree, autosave, PDF, ornamental shezhire, JSON, encryption pipeline.

Stack

React · Vite · BIP-39 · AES-GCM · Arweave/Turbo · jsPDF · ArNS

Next

Kaspi \$3 · Turbo treasury · site on permaweb · sejire.ar.io

We accelerate three strikes.

01 ~\$3 payment

Kaspi / merchant + Turbo treasury — forever without tokens for the family.

02 Permaweb + ArNS

SEJIRE on Arweave. Canon: sejire.ar.io.

03 Growth in KZ

Content, lineage pilots, the first thousands of trees and the first vaults.

SEJIRE

Free first. Forever later.

Create. Save. Send. Print.

And when you need it — lock the lineage on Arweave.
